

Project Design Phase-I
Proposed Solution

Date	18-10-2022
Team ID	PNT2022TMID28764
Project Name	Efficient Water Quality Analysis and Prediction using Machine Learning.
Team Lead	P.Bharath Kumar
Team Members	1.Ashok 2.kishore 3.Naga Babu
Max marks	2 Marks

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Efficient Water Quality Analysis and Prediction using Machine Learning.
2.	Idea / Solution description	For the WQI prediction, artificial neural network models, namely nonlinear autoregressive neural network (NARNET) and long short-term memory (LSTM) deep learning algorithm, have been developed. In addition, three machine learning algorithms, namely, support vector machine (SVM), Knearest neighbour (K-NN), and Naive Bayes, have been used for the WQC forecasting. The used dataset has 7 significant parameters, and the developed models were evaluated based on some statistical parameters
3.	Novelty / Uniqueness	In previous they find water quality with help of WQI and WQC. Now the solution is find with help of advanced artificial intelligence and it include seven parameters

4.	Social Impact / Customer Satisfaction	During the last years, water quality has been threatened by various pollutants. Therefore, modelling and predicting water quality have become very important in controlling water pollution. In this work, advanced artificial intelligence (AI) algorithms are developed to predict water quality index (WQI) and water quality classification (WQC). This is the impact of this statement.

Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

5.	Business Model (Revenue Model)	<i>The revenue stream include the Promoted trends and method. Technology and production is improved in business side. It increased the profit and also the logistic way.</i>
6.	Scalability of the Solution	Scalability of this solution can handle any amount of data and perform many computations in a cost effective and time saving to instantly serve millions of users residing at global location.
